

## Reserve Your Emergency Power Equipment In Advance

Global Power Supply provides a solution for your Business Continuity Planning. With advance reservations, you can secure equipment, pricing, and response logistics before an emergency strikes.

### Nationwide Rentals

- Generators
- Transformers
- Chillers & HVAC

### Services

- 7/24 Support Hotline
- Pre-Disaster Reminders
- Technical Support
- Refueling & Maintenance

### Accessories

- Cables & Cable Ends
- Custom Configurations

... *Se Habla Español*

### How It Works:

1. Our in-house engineer will work with your electrical contractor to configure the correct generator for your site based on its power requirements. GPS will then reserve your generator for the number of months you require.
2. GPS will contact you when warnings of a Natural Disaster are issued. At this point, you choose whether to activate your reserved equipment. Once activated, a monthly fee for the equipment, which includes up to 2000 hours of operation, will be charged by GPS for the duration used.
3. Once your reserved equipment is activated, GPS will deliver it to your site at the desired time and help prepare it for hookup by your electrical contractor. When the power outage is over, GPS will remove the generator from your site.
